

Updating HydroDesktop Version Number in Auto-Build

1. Log-in to the webpage <http://hydro10.sdsc.edu:88> with your user name and password.
2. Click on the project HydroDesktop (Hydrodesktop Auto Build). Click on **Edit Project Settings**

3. Click on the **Edit** link next to default HydroDesktop installer (see picture):

The screenshot shows the 'Hydrodesktop Project' administration page. The 'Build Configurations' section contains a table with two configurations. The first configuration, 'default Hydrodesktop Installer', has an 'edit' link highlighted with a red box and a red arrow pointing to it with the text 'Click Here'.

Configuration name	Build Steps		
default Hydrodesktop Installer Hydrodesktop	Download External Plugins, MSBuild	edit	more
default Hydrodesktop.Main x86 Builds main Hydrodesktop Application	Command Line, Nuget download, Visual Studio (sln), HydroModeler_Components, FacetedSearch sln, nuget pack and push, NuGet Pack, Nuget	edit	more

On the right side of the page, there are several utility buttons: 'Copy' (Copy this project), 'Delete' (Delete this project and all its data (build history, artifacts, etc.)), and 'Archive' (Archive this project). Below these is a note: 'Last edited 11 months ago by jiri kadlec (view history)'.

4. Change the text in Build number format from **1.5.12.{0}**C to the **new version number** (1.6.0.{0})
- NOTE: {0} represents the build number. This number is automatically increased every time somebody makes a change in the source code and pushes the change to codeplex.com. You can reset this number to zero with the “reset counter” link.

Click the **Save** button at bottom of the page to save your changes.

The screenshot shows the 'default Hydrodesktop Installer Configuration' page in the Hydrodesktop Project Administration interface. The 'Build number format' field is highlighted with a red box and a red arrow pointing to it, with the text 'Change the number here' written in red. The current value is '1.5.12.{0}'. Below this field, there is a 'Build counter' field with the value '14' and a 'Reset counter' link. A red arrow points to the 'Reset counter' link with the text 'Click Here' written in red. The 'Artifact paths' field contains the following paths: 'Build/HydrodesktopInstaller/*.exe' and 'Build/HydrodesktopSource-*.zip'. On the right side, there is a 'Configuration Steps' sidebar with a list of steps: 1 General Settings, 2 Version Control Settings, 3 Build Steps (2), 4 Build Failure Conditions, 5 Build Triggering, 6 Dependencies, and 7 Build Parameters.

Administration > Hydrodesktop Project

default Hydrodesktop Installer Configuration

Run ... Build Configuration Home

General Settings

Name: * default Hydrodesktop Installer

Description: Hydrodesktop

Build number format: ? 1.5.12.{0}

Form description may include '{0}' as a placeholder for build counter value, for example 1.{0}. It may also contain a reference to any available parameter, for example, VCS revision number: %build.vcs.number.*%.

Note: maximum length of a build number after all substitutions is 256 characters.

Build counter: * 14 Reset counter

Artifact paths: ? Edit artifact paths:

Build/HydrodesktopInstaller/*.exe

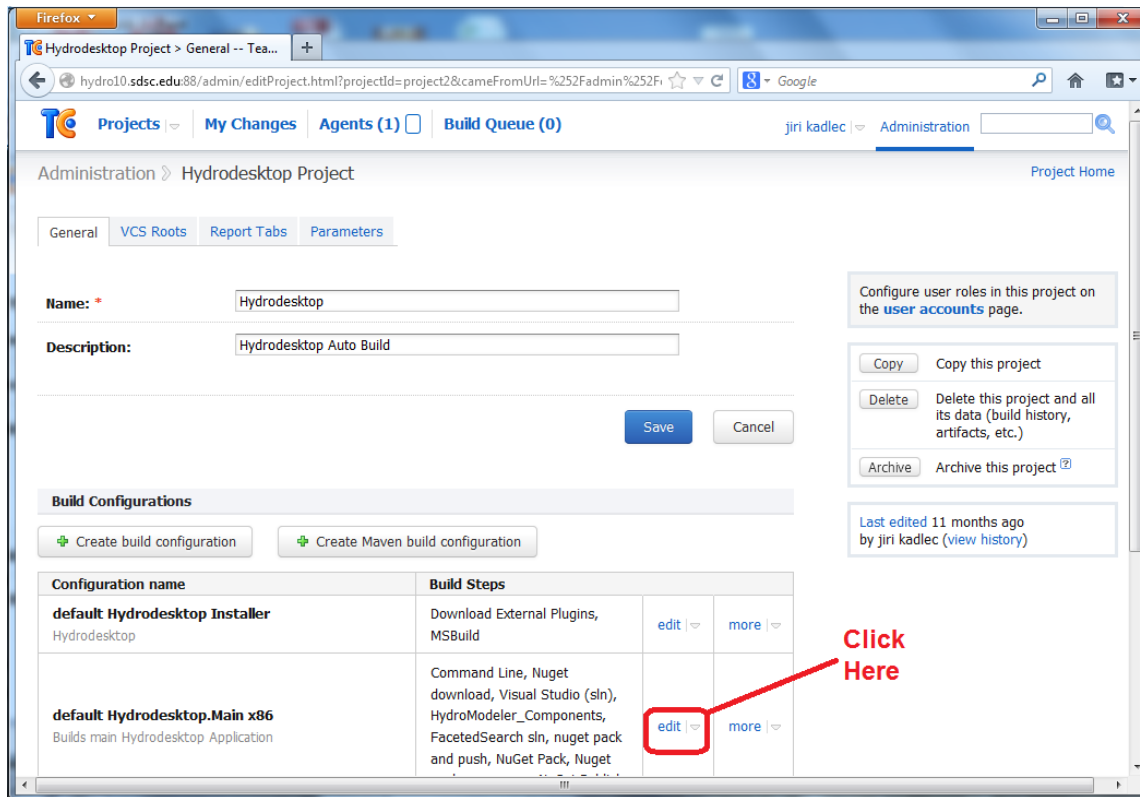

Build/HydrodesktopSource-*.zip

New line or comma separated paths to build artifacts. Ant-style wildcards like

Configuration Steps

- 1 General Settings
- 2 Version Control Settings
- 3 Build Steps (2)
- 4 Build Failure Conditions
- 5 Build Triggering
- 6 Dependencies
- 7 Build Parameters

- Go back to the HydroDesktop project settings page
Click on the **Edit** link next to **default Hydrodesktop.Main x86** link.

- Edit the build number (same as in step 4) and click **Save** to save your changes.
